DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species I (Figs. 1-2) in Paper No. 5 is acknowledged. Applicant indicated that claims 1, 2, 6, and 14 read on the elected species.
2. Accordingly, Claims 3-5, 7-13, and 15-17 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Komeda.

Komeda (Figs. 2A and 2B) teaches a microwave (i.e. high frequency) resonator including: a dielectric substrate having a ground electrode on its bottom surface (see Col. 1, lines 44-47); a half wavelength microstrip resonator is disposed on the top surface of the substrate and has a through hole (3) connecting the middle of the half wavelength resonator to the ground layer thus the half wavelength resonator forms two quarter wavelength microstrip resonators joined by the through hole (see Fig, 2A and

Col. 2, lines 53-54); and inherently the conductive via has an inductance value as is conventional. Also, note that a resonator is the most basic form of a filter as is conventional.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 2 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Komeda in view of Dixon, Jr. et al.

Komeda teaches a microstrip resonator as described above. However, ^{Komeda}~~Dixon~~ does not teach including input/output wires.

Dixon, Jr. et al. teaches a microstrip filter (60) having a wire (62) connected to an external circuit (see Fig. 2, and Col. 3, lines 29-37).

Art Unit: 2817

It would have been considered obvious to one of ordinary skill in the art to have included a wire such as taught by Dixon, Jr. et al. at the input and output (i.e. the non-grounded ends of the half wavelength resonator) of the Komeda microstrip resonator, because it would have provided a well-known means for connecting the microstrip to respective external circuits, thereby suggesting the obviousness of such a modification.
